FOR IMMEDIATE RELEASE

The Black Hawk Casino Using Latest Air Reactor Technology to Further Sterilize Gaming Environment

SHAWNEE (November 19, 2020) – The Black Hawk Casino is continuing its commitment to providing the safest entertainment venue for its guests, having added a new Air Reactor System designed to destroy viruses, human Coronavirus and bacteria within the casino.

In addition to the continuous sanitizing schedule already in place at the casino, The Black Hawk Casino has worked with Hi Tech Air Solutions to add an Air Reactor System throughout the casino that has proven to be effective at destroying the viruses. The Black Hawk Casino is also taking swabs of various areas within the casino and sending samples to labs for COVID-19 analysis. Casino executives feel strongly that the steps they have taken in recent months are reinforcing their goal to implement processes to ensure the safest possible environment for their guests and employees.

“We’ve been at the forefront of doing all we can to make sure we provide a safe and sterile environment for everyone who walks in our doors,” Robert Abney, an executive at The Black Hawk Casino, said. “With the new air filter system and the testing component in place, our goal is to make sure we have all the systems in place and to verify they are working.”

The Air Reactor System installed by Hi Tech Air Solutions produces OH radicals to destroy viruses, mold, mildew, bacteria, VOC’s, formaldehyde and mycotoxins. This technology is FDA-approved. NASA created it more than 40 years ago. The Air Reactor System was invented, manufactured and distributed in Oklahoma.

Former OU coach Bob Stoops has endorsed the Hi Tech Air Solutions reactor technology. According to Coach Stoops, “the system provides clean air and surfaces throughout the casino, all without the use of harsh agents.”

With the routine surface cleaning processes, the addition of the air filter system and the regular lab testing to verify the casino is virus-free, The Black Hawk Casino continues to take whatever steps are necessary to maintain a safe and healthy environment for the customers and the employees at the casino.

Hi Tech Air Solutions was created to provide a line of products to help address indoor air quality issues in an effort to improve the quality of life for everyone. Using years of research, development and testing that led to the high-end technology, Hi Tech Air Solutions works with companies to provide healthy environments throughout all their facilities.

The Black Hawk Casino seeks to provide the most entertaining gaming experience in Oklahoma while supporting the objectives of the Sac and Fox Nation. With locations in Shawnee and Stroud (Sac and Fox Casino), the 24-hour casino is committed to exceeding its guest experiences by developing a superior team of employees who are responsive to community needs and focused on maximizing the entertainment value to the patrons.
